

Learning Assessment - Answers

1. Which SAP tools support you in your application lifecycle management tasks?

Choose the correct answers.

- ☒ A SAP Solution Manager
- ☐ B Transaction S_LIFECYCLE in any AS ABAP-based SAP system
- ☒ C System Landscape Directory (SLD)
- ☐ D SAP Advanced Landscape Optimizer (SAP ALO)
- ☐ E SAP Landscape Planning Tool - Version 1 (LPT1)

SAP Solution Manager and the *System Landscape Directory* are important tools in the application lifecycle management context. The other terms are made-up names; transaction *S_LIFECYCLE* is also fictitious.

2. Which of the following statements about load balancing in SAP systems are correct?

Choose the correct answers.

- ☐ A The Internet Communication Manager (ICM) distributes HTTP requests to all available application servers on your SAP system.
- ☒ B The ABAP Message Server can distribute requests to all available application servers during logon with the SAP GUI.
- ☒ C The ABAP dispatcher distributes user requests to the work processes of the present application server.
- ☒ D The SAP Web Dispatcher can distribute HTTP requests to different application servers of an SAP system in succession.

The *Internet Communication Manager* (ICM) of an application server instance can only forward HTTP requests to the processes in its own application servers. If load balancing is desired for HTTP requests, the *SAP Web Dispatcher* can be installed on a computer in the demilitarized zone (DMZ) and be connected to one or more SAP system(s).
