

Learning Assessment - Answers

1. When using Software Provisioning Manager (SWPM) to install an SAP system you will execute some early steps in a certain sequence. Bring the following activities into the right sequence, regarding your work with SWPM.

Arrange these steps into the correct sequence.

- ☐ 4 Start the installation routine
- ☐ 2 Download latest version of the correct type of SWPM
- ☐ 1 Identify the product and release that you want to install
- ☐ 3 Extract the SWPM archive

You are correct! First you need to identify the product and release that you want to install, then you download the latest version of the corresponding type of SWPM, then you extract the SWPM archive, then you start the installation routine. Read more on this in the lesson Installing an SAP System Using Software Provisioning Manager (SWPM) of the course ADM110.

2. Which file records all the notifications of every installation step?

Choose the correct answer.

- ☐ A `sapinst.log`
- ☐ B `dialog.xml`
- ☒ C `sapinst_dev.log`
- ☐ D `packages.xml`

You are correct! The `sapinst_dev.log` records all the notifications of every installation step. Read more on this in lesson Installing an SAP System Using SAPInst of the course ADM110.
