

Client Concept

LESSON OVERVIEW

In this lesson, you will learn how to identify client roles in the SAP system. In addition, you will learn about the concepts of change management within an SAP system environment.

Business Example

As an SAP system administrator or project team leader, you must monitor software configuration changes and program code changes to protect your production system from incorrect configuration settings or program bugs.

LESSON OBJECTIVES

After completing this lesson, you will be able to:

- Identify data types in an SAP system

Data in an SAP System

Data in an SAP system can be divided into two categories:

1. Client-dependent data

Application, customizing, and user master data, which only affect one client.

2. Client-independent data

Customizing data and all repository objects, which affect the whole SAP system environment.
