> 💡 Hint:
> The guide is available for example on SAP Help Portal for SAP SCM (https://
> help.sap.com/viewer/p/SAP_SUPPLY_CHAIN_MANAGEMENT) in area
> *Administration→ Planning Guide – SAP Business Suite Landscape
> Implementation (<Language>)*.

You also need the installation guide for the SAP system itself (such as Installation Guide – SAP Enhancement Package 8 for SAP ERP 6.0 – Java and ABAP). The installation guides contain planning information about the software units to be installed (such as settings that need to be made before the actual installation).

> 💡 Hint:
> For SAP NetWeaver, this documentation is available also at https://
> help.sap.com/viewer/nwguidefinder .

For the actual work with the installed SAP system, SAP provides documentation for the respective releases.

Installation Tools

The technical installation of an SAP system is performed with the tool Software Provisioning Manager (SWPM). Depending on which scenario is used, a configuration wizard may also be available to simplify and speed up the configuration.

> ⟫ Note:
> Software Provisioning Manager 1.0 is the successor to product-specific and release-specific installation tools, such as SAPinst. This tool is part of the Software Logistics Toolset and contains the latest SAPinst version with software provisioning services various products and versions and for all platforms.
>
> For more information about the Software Logistics Toolset, go to SAP Support Portal on page https://support.sap.com/en/tools/software-logistics-tools.html (or its successor).
