Maintaining SAP Systems

LESSON OVERVIEW

Once SAP systems have been installed and are in productive use, they have to be maintained at regular intervals as part of software lifecycle management.

This lesson provides first an overview of the different types of maintenance for SAP systems, followed by an examination of the tools provided by SAP for this purpose.

Business Example

Your company plans to implement SAP software. As a member of the project team, you want to find out which part of the SAP software can be maintained with the help of which tools.

LESSON OBJECTIVES

After completing this lesson, you will be able to:

- List Tools for maintaining SAP Systems

Maintaining SAP Systems

One important element of SAP Software Lifecycle Management is the maintenance and updates of SAP systems. A number of different terms are used in the SAP context, depending on the type of maintenance involved. They are delimited from one another – together with the names of the tools used – in the figure "Overview of SAP System Maintenance" .
